MIRRORS

The Kenworth DigitalVision Mirrors enhance driver visibility by providing a clearer and wider view around the truck – during the day, at night, and in inclement weather. The large high-def interior displays put the mirror view image in an easier-to-see position keeping the driver's eyes closer to the road. Technology innovations allow you to track your trailer around a corner or while backing – through any driving environment.

PERFORMANCE

Advanced technology and street-smart design — sloped hood, fuel-efficient drivetrain, aerodynamic and job-specific options, unconventional maneuverability and supremely comfortable driving environment — make a Kenworth T880 the ideal business partner.

DURABLE AERODYNAMIC SIDE MIRRORS

Cowl mounted for better stability and located farther forward and lower to optimize rearward visibility. The convex portion is 37 percent larger than Kenworth's standard convex mirror design

Torque Assisted Steering

Torque Assisted Steering is an adaptive steering technology featuring an electric motor control system that works with the hydraulic gear to improve the driving experience. It adjusts torque based on vehicle speed, easing effort at low speeds while firming at higher speeds to provide a consistent feel.

It can be tailored to the driver's preference with three levels of assistance controlled by a conveniently positioned dash switch. This allows the driver to dial in the system so that it works for them.

15-INCH DIGITAL DISPLAY

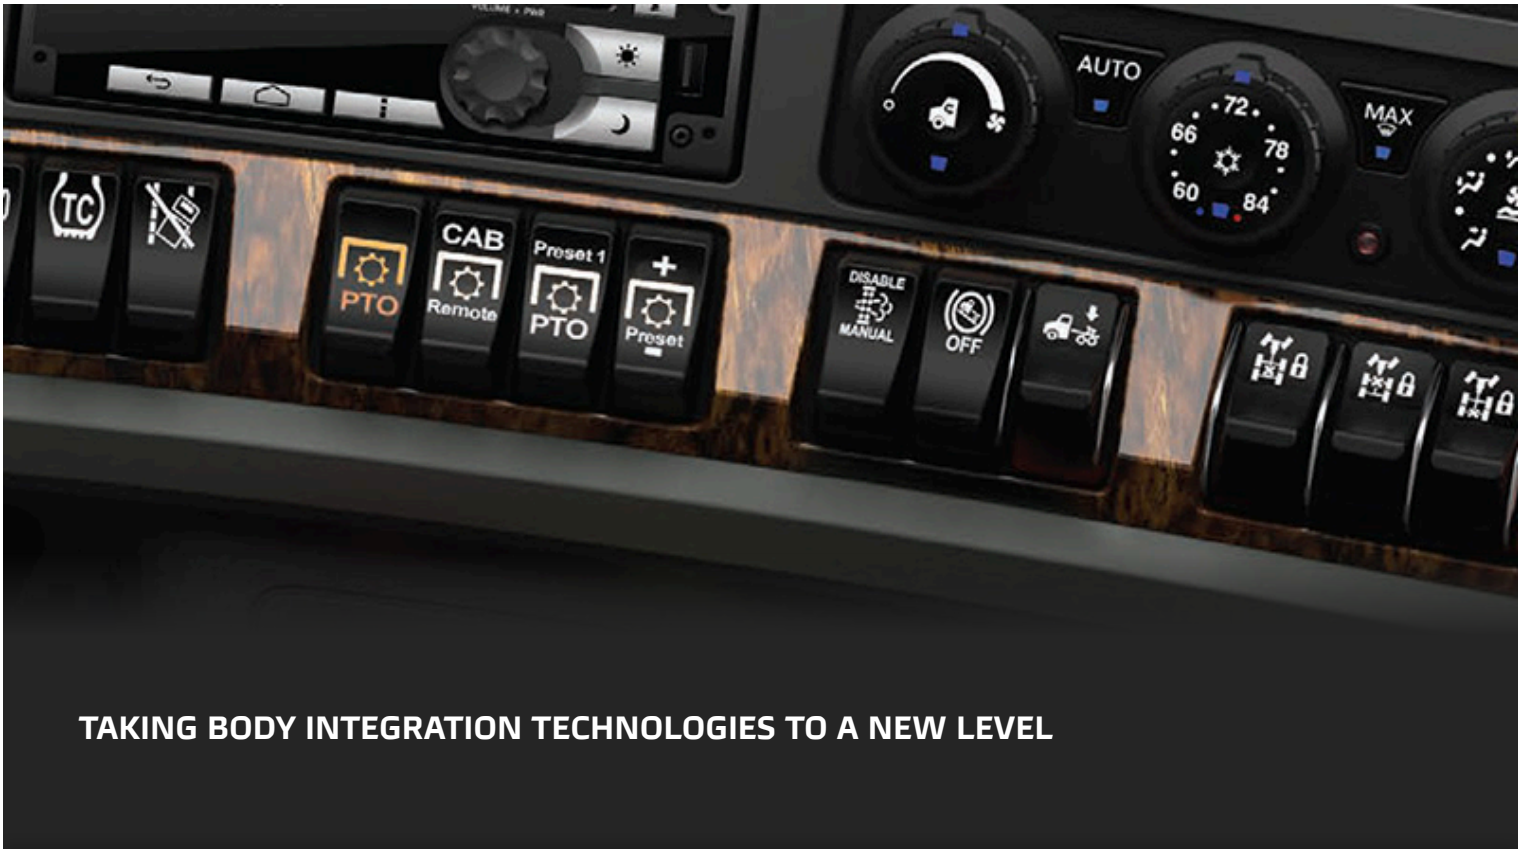

An industry-first at this size, the new 15-inch high-definition, fully digital instrumentation, contains all the information a driver needs to operate the truck – configurable for as much or as little content as they want.
